Compute Cloud (EC2). With Compiere running on the Cloud, enterprises of all sizes can leverage this deployment option and the convenience of Amazon's on-demand computing services.

Frequently Asked Questions

Why should I hire a professional web design company to design my website?

Website a new sales channel to your business which works 24 hours a day 7 days week irrespective of whether you are on vacation or busy with something. When you open an office or showroom, did you do all of the interior decoration by yourself or some one with no-brand? I am sure you spend lot of resources and got it done in the right way by highly qualified professionals.

Why should I hire a professional copywriter to write content for my website?

Yes, you can do it yourself or get it done in-house if you feel you are able to accomplish the things listed here on getting successful on the Internet. However, we strongly suggest enlisting the talents of a professional.

What software does indiainternetready.com use to design, test and deploy websites?

For Web design, we use Macromedia Dreamweaver. Dreamweaver generates very clean HTML code that meets W3C validation standards compared to other products. In addition, we also use several in-house developed software to fine tune the code and to make sure it meets our company web design standards. For Web graphics, we use Adobe Photoshop, Macromedia Fireworks and Macromedia Flash, because they provide clear, compressed graphics that load fast so as not to keep your visitors waiting. Unlike the competition and freelance web designers, we use all licensed software.

How long does it take to design a website for my business?

It varies from website to website based on the requirement. In the initial consultation, we will provide you the timeline estimates for your project.

Once you complete website design, who owns the Website?

Once the final payment is received, you will receive 100% ownership of your Website. We will make all the files including PSD files available for you for download. If your website is large and file sizes are very large, we will mail you a CD with all the files.

IIR proof of value

Proof of Value (POV) is defined as "evidence which demonstrates that IIR fits the business requirements vice versa". This powerful exercise helps to "educate and influence your business to implement a solution or process".

Tenth Planet offers you with a powerful methodology to make sure you meet your business solution expectations, using creative approach and wide technology expertise with the POV service. We improve the product with our services on POV for new requirements. Our POV Services are intended to demonstrate the value statements and Return on Investment (ROI) for the proposed project.

Proof of Value Highlights

- Live demo with Expert Assistance
- Case Studies
- Comparisons of Edition
- Free Trail on Cloud
- Business Process Blueprint
- Fit Gap Reports
- Proof of Concept in 4 weeks
- Estimation and Proposal

IIR Implementation

Tenth Planet IIR experts use a proven implementation methodology to control costs, minimize disruption, and streamline the process, so your go-live is successful and guarantee in 90 days. Our consultants can assume complete control of your implementation or guide your internal team through the structured IIR implementation process. After the go-live, Tenth Planet IIR consultants can help you optimize system performance in all key areas, including production, distribution, finance, and customer relationship management.

IIR custom development services leverage the flexible architecture of the IIR solution and make it possible for customers to request software modifications, custom-written reports, or data-integration services to enhance how their solution addresses unique business challenges.

- Project Management

IIR Enterprise Cloud Edition

Tenth Planet offers Cloud services for IIR solutions that provide customers with a quick, low-risk way to take advantage of advanced software solution capabilities. By using the Amazon EC2 Cloud option, you can leverage state-of-the-art functionality without an upfront investment of time and money in computer servers and software.

With IIR on the Cloud, you use a secure instance of the IIR dedicated for your use. Unlike a Software-as-a-Service (SaaS) deployment where you share a hosted instance of a solution and database with other customers, IIR on the Cloud offers you greater flexibility to customize and upgrade the solution in a way that meets your specific requirements. Tenth Planet is committed to managing IIR on Cloud to suit customer requirements.

Highlights

- Per user license subscription
- Low monthly investment
- Managed services
- Single point of contact
- On demand customization
- Ready to use integration
- Seamless upgrades
- Secured Private instance
- Support desk 24/7

- Transparent Service Delivery

Contract Agreements

MOU, NDA, MSA, SOW FOR 4D and O&S, these are the only contract documents for any project for any customer, we can template them and keep them all available online editable and ready to submit for a new customer.

Business Requirement Specification

We bring all the Documents, Videos, Images, Spreadsheets, PDF, etc whatever the customer has sent to us/given to us/collected by us into this single folder for the entire duration of the project

Work Breakdown Structure

We maintain all the requirements during 4D and tickets during O&S(Operations & Support) into our "Incident Management - Service Support Desk" software and bring all the requirements [4D/O&S] into a single place with each requirement marked as Task, assigned to a person, estimated/actual hours/dates, release/milestone/iteration/sprint, and also category of incident [SR – Support Request ,CR – Change Request ,ER- Enhancement Request], that is during 4D or O&S.

Software Requirement Specification

We keep one single WIKI format and bring all the Functional specifications, Technical specifications, Test cases, Meeting notes, all related to the Scope of requirements for the project into a single document with same name (different versions) and merge all the loose end documents into one big single document called "SRS"

Source Control Management

We always ensure the latest source code for DEV/UAT/PREPROD/PRODUCTION environment is kept very securely and versioned/labeled and marked. Every Friday we can do a full build for any project and ensure we are not playing with single class level byte code/script insertions, etc.

Release Guide

All release related documents [eg: Notes, User guide, Dev guide, Admin guide, SOP, How-to-videos, Environment guide, etc] in one single WIKI and keep it always the same name and different version and keep updating the same document.

Acceptance Certificate

We ensure for every project for every release gets the UAT sign off, GO LIVE sign off, Time-sheet sign off and ensure they are all 100% approved by customer always and kept safely online.

WORDPRESS

WordPress is an online, open source website creation tool written in PHP. But in non-geek speak, it's probably the easiest and most powerful blogging and website content management system (or CMS) in existence today.WordPress is installed on a web server that is either part of an Internet hosting service or a network host in its own right and it is of high value today.

Some of the important and highly incredeble features of the wordpress which we use in our day to day basis are as listed below:

- Not everyone requires the same access to your website. Administrators manage the site, editors work with content, authors and contributors write that content.
- You quickly and easily upload images and media to WordPress. Drag and drop your media into the uploader to add it to your website. We've even added a few image editing tools.
- WordPress is optimized for search engines right out of the box. For more fine-grained SEO control, there are plenty of SEO plugins to take care of that for you.

WORDPRESS FEATURES

WordPress is a powerful semantic publishing platform, and it comes with a great set of features designed to make your experience as a publisher on the Internet as easy, pleasant, and appealing as possible. We are proud to offer you a freely distributed, standards-compliant, fast, light, and free content management system, with sensible default settings and features, and an extremely customizable core and it can be customized very well.

CONTENT MANAGEMENT SYSTEM

We're now living in a content driven world. That means if you want to connect with your customers, you have to regularly deliver fresh information. Your blog and website are a key part of your content delivery efforts. Basically, a blog and site that you control is your best marketing tool. But managing a business site is different from running a hobby blog.

Some of the important features of the Content Management System which we use in our day to day basis are as listed below:

- Managing roles for editors, contributors and others,including notifications to files,administering multiple sites if necessary,adding functionality through modules and plugins.
- A great CMS will have built in SEO tools to help you automatically create URLs that work for both readers and search engines.It should also help your search engine results look better.
- Tracking what's happening with your content in terms of views, shares and navigating your site is an essential part of carrying out your content strategy.

CMS FEATURES

Just as the content you publish is the backbone of your interaction with your key customers and audience, publishing tools are the core of any CMS. A good CMS will adapt to the type of content you want to publish – everything from short news items to longer articles – and integrate this into an overall publication workflow. It will also handle SEO, tag content, add images and multimedia and more from within the publishing interface.

MEDIA MANAGEMENT

The WordPress Media Library is essentially a directory of every single media file that has been uploaded to your website (whether it is ultimately published or not). Media files include images, videos, audio files and even documents. Regardless of where you upload the media to your site, it will show up in the library from where you can view, edit and can manage it.

Some of the important and highly incredeble features of the Media management which we use in our day to day basis are as listed below:

- Use your mouse to drag and drop your files.You can do operations your folders.If you want to select an image from the "Select an image"-dialog you can filter when inserting media.
- Image file size is important for a number of reasons, and fortunately, it is possible to compress images with little to no noticeable difference.
- The Media Library Screen allows us to edit, view, and delete Media previously uploaded to our blog. Multiple Media objects can be selected for deletion.

MEDIA MANAGEMENT FEATURE

A picture says a thousand words, which is why it is important for you to be able to quickly and easily upload images and media files to WordPress. Drag and drop your media into the uploader to add it to your website. Add alt text, captions, and titles, and insert images into your content. We have even added a few image editing tools with which you can have fun.

WOOCOMMERCE

WooCommerce is a free eCommerce plugin that allows us to sell anything, beautifully. Built to integrate easily with WordPress, WooCommerce is the world's favorite eCommerce solution that gives both store owners and developers complete control. With endless flexibility and access to hundreds of free and premium WordPress extensions, WooCommerce now powers 30% of all online stores.

Some of the important and highly incredeble features of the woocommerce which we use in our day to day basis are as listed below:

- WooCommerce is built to integrate with WordPress,making it the obvious eCommerce choice for existing users and connecting you to the fast-growing WordPress ecosystem.
- From real products and digital downloads to subscriptions, content and even your time, you'll be able to set up a WooCommerce store to sell worldwide (or by country, as you wish).
- WooCommerce is audited by Sucuri,the industry leader in plugin security,to ensure that it adheres to WordPress practices & coding standards, and is kept secure and up-to-date.

WOOCOMMERCE FEATURES

WooCommerce is designed to mesh fluidly with the current trends of the default WordPress themes - keeping your store design modern and in-line with current design trends.Our admin settings are

structured to be used easily on hand-held devices and can update your store on the move.Great brands are built on publishing and content and WooCommerce is built on WordPress which means you can integrate eCommerce with the wordpress.

E-LEARNING

WordPress forayed into the Learning Management System scene around early 2010s, not long after establishing itself as a dominant web publishing tool. The idea of using a CMS like WordPress as a platform to develop eLearning websites can be conceptualized as a LCMS - Learning Content Management System and later turned into full fledged LMS.

Some of the important and highly incredeble features of the LMS which we use in our day to day basis are as listed below:

- WordPress, being a more contemporary ecosystem, offers tremendous ease of access and a modern user interface as compared to the complexity of standalone systems.
- The internet is a place where the phrase "don't judge a book by its cover" does not apply.It will always, gauge your website in terms of design and user experience, no matter how great the content.
- One of the USPs of WordPress is that it can be modeled as a powerful business & marketing tool with high returns on investment.An added advantage would be the level of scalability.

E-LEARNING FEATURES

Despite being relatively new to the eLearning picture, the WordPress Learning Management System niche is catching up with the big players and it's catching up fast. An ever increasing number of education entrepreneurs are opting for WordPress as their choice of platform to build their eLearning sites.It has many incredible features and it is mainly used due to its ease of access and simplicity.

RESPONSIVENESS

Responsive themes follow the responsive web design approach which aims to create websites that offer optimal user experience across various devices and screen resolutions including desktop computers, tablets such as iPad, smartphones and other mobile devices. A responsive WordPress theme smoothly adjusts its layout based on the screen size and resolution.

Some of the important and highly incredeble functions of the responsiveness which we use in our day to day basis are as listed below:

- Responsive themes offer better readability and usability on smaller screens such as smart phones. It also prevents you from creating a device specific mobile version.
- A growing number of people are accessing internet through tablets & smartphones.Responsiveness allows a site to be viewed on various devices without using additional themes or plugins.
- A responsive WordPress theme smoothly adjusts its layout based on the screen size and resolution.It prevents you from creating a device specific mobile version..

RESPONSIVENESS FEATURES

At its most fundamental, responsive design is about giving your site a responsive layout: one that adjusts according to the screen width.Adding media queries to your stylesheet to change the CSS for certain screen widths. For example, if your site has a sidebar on the right, you could use a media query to move it below the main content on smaller screens, as otherwise it would be too narrow.This is responsiveness.

Why should I hire a professional web design company to design my website?

Website a new sales channel to your business which works 24 hours a day 7 days week irrespective of whether you are on vacation or busy with something. When you open an office or showroom, did you do all of the interior decoration by yourself or some one with no-brand? I am sure you spend lot of resources and got it done in the right way by highly qualified professionals.

Why should I hire a professional copywriter to write content for my website?

Yes, you can do it yourself or get it done in-house if you feel you are able to accomplish the things listed here on getting successful on the Internet. However, we strongly suggest enlisting the talents of a professional.

What software does indiainternetready.com use to design, test and deploy websites?

For Web design, we use Macromedia Dreamweaver. Dreamweaver generates very clean HTML code that meets W3C validation standards compared to other products. In addition, we also use several in-house developed software to fine tune the code and to make sure it meets our company web design standards. For Web graphics, we use Adobe Photoshop, Macromedia Fireworks and Macromedia Flash, because they provide clear, compressed graphics that load fast so as not to keep your visitors waiting. Unlike the competition and freelance web designers, we use all licensed software.

How long does it take to design a website for my business?

It varies from website to website based on the requirement. In the initial consultation, we will

provide you the timeline estimates for your project.

Once you complete website design, who owns the Website?

Once the final payment is received, you will receive 100% ownership of your Website. We will make all the files including PSD files available for you for download. If your website is large and file sizes are very large, we will mail you a CD with all the files.

When I place my website design order, who will I be working with?

Once you place the web design order, customer service representative will be in touch you. Project Manager for your project also will also work with you closely. Account executive will be in contact with you all the time.

What kind of guarantee do you offer on my web design order?

We completely guarantee our design work. After viewing the initial draft(s), if you are not satisfied and we offer revisions based on your feedback. If you are not satisfied even after revisions and wish to discontinue work, we will refund 100% of your deposit. Please note that, all the work done by us until that point is owned by us and you can not use it in any manner without our explicit permission.

Once the website is complete, can I update it myself?

Yes, you own the website and you can make changes at any time if you wish. You need to have a licensed copy of a Web design software and know how to transfer files to and from your live website (which are included in our website hosting setup documentation that is sent to you at the time of hosting).

What is your payment policy and what type of payments do you accept?

We receive 100% of your estimated total as a deposit prior to beginning work. We accept check, online transfer to our bank account and all popular credit cards including Visa, Mastercard, Discover, American Express through Google Checkout and PayPal as well.

Website content - what do I put on my website?

What would depend on the goals of your web site. If you run a business website you would include as much information about your products or services that your customers would need to purchase from you. We will discuss with you in detail about this and guide you at the time of signing up for services.

What is a page layout?

Page layout is the geometry of a page. It will help us to define how many regions will appear and how they are visually organized.

What about payment gateway and shipping integration on eCommerce websites?

We can integrate the most common payment gateways (PayPal, Google Checkout) on our eCommerce websites, however you might have a specific request and it might take some time to study that specific case. We are open to discuss with you and help you during the integration process. It may impact the amount of time we initially defined at the start of the project.
